PENJADWALAN SEMINAR TUGAS AKHIR

KELOMPOK 1

Page 01

Sistem Penjadwalan Seminar dan Chatbot Layanan Akademik Menggunakan Algoritma Genetika dan Large Language Model (LLM)

kelompok 1

11231036	Muhammad Azka Yunastio
11231030	Hari Yatun Nasifa
11231034	Junnior Marcellino Polla
11231041	Mochammad Reezqi Pratama
11231012	Anugrah Alian Putratama
11231006	Akmal Falah Maulana
11201085	Riyo Rizky Prayogi

MASALAH SAAT INI?

Permasalahan Administrasi Akademik

Proses assignment (penugasan) dosen penguji dan penyusunan waktu seminar yang konvensional memakan waktu lama dan rentan terhadap human error.

Akar Kompleksitas (Constraints)

Sulitnya menyinkronkan jadwal karena harus memenuhi dua syarat utama secara bersamaan:

1. Mencocokkan ketersediaan waktu luang antara mahasiswa, dosen pembimbing, dan dosen penguji (menghindari bentrok).
2. Memastikan kuota beban menguji terbagi secara adil dan proporsional ke semua dosen.

DAMPAK

Penundaan seminar, jadwal yang tumpang tindih (konflik waktu), dan penumpukan tugas pada dosen tertentu.

Setting Clear Priorities

Effective scheduling begins with identifying which tasks are the most important and urgent before assigning time to less significant activities. By ranking responsibilities according to their impact and deadlines, individuals can ensure that critical work receives adequate attention first.

Batasan Masalah

Time blocking involves dividing the day into dedicated periods for specific activities instead of constantly switching between different tasks. Each block has a clear purpose, such as focused work, meetings, learning, exercise, or relaxation.

Metodologi Pengembangan (Agile)

- Pengumpulan Kebutuhan
Analisis kebutuhan fungsional & non-fungsional dari mahasiswa, dosen, dan koordinator prodi
- Perancangan Sistem
Use case diagram, activity diagram, arsitektur AI, dan desain antarmuka
- Pengembangan
Coding fitur secara bertahap dalam siklus iterasi pendek
- Pengujian
Black box testing dan User Acceptance Test (UAT)
- Deployment
Rilis sistem setelah seluruh siklus stabil dan tervalidasi

Metodologi Kecerdasan Buatan (ML/AI)

Even the best schedules require flexibility because unexpected situations, changing priorities, and unforeseen responsibilities are part of everyday life. Smart scheduling includes buffer time between important activities and allows adjustments without disrupting the entire plan.

Avoiding Scheduling Mistakes

Many scheduling problems arise from poor time estimation, excessive multitasking, unrealistic planning, or failing to account for breaks and interruptions. Recognizing these common mistakes helps individuals create more practical schedules that reflect actual working conditions rather than ideal scenarios.

Maintaining Work-Life Balance

Smart scheduling is not only about increasing productivity but also about protecting physical health, mental well-being, and personal relationships. Allocating time for rest, family, hobbies, exercise, and relaxation prevents burnout while improving motivation and overall satisfaction.

Reviewing and Adjusting Plans

Regular evaluation is essential for keeping schedules effective as priorities, goals, and circumstances evolve over time. Reviewing completed tasks, identifying delays, and analyzing productivity patterns provide valuable insights into what works well and what needs improvement.

Developing Consistent Scheduling Habits

The greatest benefits of smart scheduling come from making it a daily habit rather than an occasional activity. Consistently planning ahead, following established routines, monitoring progress, and adapting when necessary help individuals build discipline and improve time management skills over time.
